L	Fencing/Lighting	1	3
Value to enter into TERM Scale Condition =>			4

Key
5 Excellent
4 Good
3 Adequate
2 Marginal
1 Poor

- * Determine median value across components. Calculate this by tabulating the number of components inspected at each condition rating, and use as the overall rating the lowest rating achieved by at least half of the components. For instance, if 10 components were inspected and the results were evenly distributed between ratings (2 components with each of the 5 rating values), the overall rating would be 3 as at least half of the ratings would have a value of 3 or less.

Maintenance Facility
